

NI MASCHINE MK2 → TRAKTOR PRO 4

GideonSTEM Maschine

A custom controller mapping that
turns a drum machine into a **four-
stem performance instrument**.

● v0.5-alpha

2026

@gbroeckling

One box. Four stems. Every effect.

Traktor Pro 4 brought **Stems** back — every track split into drums, bass, melody and vocals — alongside one of the deepest MIDI mapping engines in DJ software.

The Maschine MK2's **16 velocity pads** and **8 group buttons** are perfect tactile real-estate going unused. GideonSTEM bridges the two — all hands, no mouse.

16 pads

4×4 VELOCITY GRID

8 pages

GROUP BUTTONS A-H

40 + FX

TRAKTOR EFFECTS, ONE TAP AWAY

Maschine MK2, repurposed

PADS

16 velocity pads

A 4×4 grid — the heart of the mapping. Loops, FX, patterns and stem kills.

GROUPS

8 buttons • A–H

Page selectors that swap the pad grid between control layers.

KNOBS + TRANSPORT

8 endless knobs

Stem volumes, FX params, browse & transport for full hands-on flow.

Mix the parts, not just the track

Each loaded track splits into four stems. Independent **volume, mute and solo** live under the pads and group buttons — full-mix knobs start at unity, with instant kills for drops and acapella moments.

Drums

Kick / snare / hats — kill for breakdowns, solo for build-ups.

Bass

Swap low-ends between two tracks without an EQ wrestle.

Melody

Layer hooks and instrumentals across a transition.

Vocals

Drop an acapella over any beat with one mute.

What’s under your hands

MIX

Stem Mixer

Per-stem volume, mute & solo across both decks.

LOOP

Loops & Loop Roll

Eight loop sizes plus momentary roll for stutter edits.

PAGE G

FX Selector

Load any of 40+ Traktor effects straight onto the pads.

PAGE F2

Loop Recorder

Capture a phrase live — size, dry/wet, play, undo.

PATTERN

Pattern Player

Two drum voices, 808/909 kits, sparse-to-busy patterns.

NAV

Beatjump & Cue

Single-step jumps, hotcues and focused-deck transport.

40+ effects, one pad away

The G page maps Traktor's **FX Pre-Selection** list onto the grid. Tap a pad to load the effect; **hold to swell** the wet signal, release to pull it back out. No menu-diving mid-set.

01 Beatmasher	05 Gater	06 DeLay	19 Iceverb
32 Bouncer	40 Zzzurp	43 Stirrretch	12 Reverb
08 Flanger	23 Filter	17 Echo	29 Crush
34 Ramp	11 Phaser	27 Wormhole	36 PoLar

PAGE F2 · LOOP RECORDER

Capture a phrase live

Grab a loop from the mix and replay it on top — a two-handed transport with size on one row, dry/wet and rec/play/undo mirrored for reach.

SIZE · 4 / 8 / 16 / 32

DRY/WET

REC

PLAY

UNDO

PATTERN PLAYER · FX3 + FX4

Two drum voices on tap

Two of Traktor's pattern players driven from the pads — classic **808 / 909** kits, eight patterns ordered sparse → busy so stepping up drives a build.

VOICES

PATTERNS

ONE-SHOTS

Generated, not hand-clicked

The mapping isn't built by clicking in Traktor's editor — it's compiled by a Python generator from a catalog of verified command encodings, so every build is identical and reviewable.

Why Group G “only worked sometimes”

Each FX pad fired three commands at once — select, route and unit-on. Loading an effect re-initialises the FX unit, which **races the on**. Traktor has no command-delay, so the order was never guaranteed.

The fix: **latch the FX arm onto the page button**, fired before the pad ever moves. They can no longer collide.

BEFORE · THE RACE

```
pad ↓ → select(362)
        + route(321)
        + unit-on(369) ⚡ collides
```

AFTER · LATCHED

```
page G ↓ → route + arm FX1
pad ↓ → select + wet only ✓
```

Shipped & what's next

- ✓ **Loop Recorder rebuilt** with proper transport encoding.
- ✓ **Group-G arm now latches** — the race is closed.
- ✓ **Reproducible build** verified byte-for-byte.

-
- Hardware-test the G latch & the researched Pattern Player layout.
 - Differentiate the two loop pages & wire full recorder transport.
